PROFESSIONAL SUMMARY

Product Designer (UI/UX) with professional experience designing responsive web and mobile products across SaaS, fintech, Web3 and healthcare. Strong in user research, wireframing, prototyping, usability testing and Figma design systems, owning work end to end from research and information architecture to developer-ready hi-fi handoff, in close cross-functional collaboration with product managers, founders and engineers. Data-driven: redesigned an error state at Vidio, lifting daily offering clicks from under 500 to 11,000+. Upwork Top Rated (top 10%) with a 98% Job Success Score across 40+ projects for international clients, including Lagrange, Homedec and Trans Gianyar. Uses AI-assisted prototyping (Claude, Google Stitch, Antigravity) to move from idea to testable prototype faster.

PROFESSIONAL EXPERIENCE

Freelance Product Designer | Upwork and Independent Clients

Jul 2024 - Present | Remote

- Delivered 40+ responsive web and mobile projects across SaaS, Web3, fintech, healthcare and sports for international clients, owning each from requirements, user research and wireframing through Figma prototyping to developer handoff, collaborating cross-functionally with founders, product managers and developers; 98% Job Success Score.
- Designed the responsive website for HOMEDEC 2026 (an exhibition that drew 28,000 visitors, +10.7% vs. 2025), turning a gradient-heavy key visual into a scalable UI system and visual design for two audiences, visitors and exhibitors; built with accessibility in mind and shipped at 92 SEO, 88–92 accessibility and 96–100 Best Practices on Google PageSpeed.
- Designed the staking website for Lagrange's $LA token, extending the existing brand guideline and working directly with the founder on the stake token flow and its interaction design; the live product has 158K $LA staked (≈ $9.3K) as of Nov 2026.
- Designed Trans Gianyar's driver app (15 screens, 38 UI states) for live trip tracking and passenger management; built the Figma design system and iterated hi-fi prototypes against the PM's feasibility feedback, working cross-functionally to reach developer handoff in 2 weeks.

Product Design Intern | Vidio

Feb 2024 - Jun 2024 | Jakarta, Indonesia

- Owned 3 projects end to end (user research, competitor analysis, wireframes, hi-fi design, usability testing) while supporting my mentor's weekly discovery-flow work across the Vidio platform.

- Redesigned an error state to surface the content offering as a recovery path, a data-driven fix that lifted daily offering clicks from under 500 to 11,000+ over 1 month.
- Designed 3 interaction patterns for explicit homepage feedback; the team selected the long-press bottom sheet because it kept the homepage uncluttered.
- Identified 2 usability issues in the live TV section (unclear TV icon destination; schedule separated from channels) and redesigned the discovery flow: added a “Live” badge to channel icons and replaced the icon-only list with content cards showing thumbnail, live program title and channel name.

UI/UX Design Intern | Vesuvio Studio
Sep 2023 - Nov 2023 | Remote, Indonesia.

- Translated client requirements into 3 user flows and 20 hi-fi screens (responsive mobile and desktop) for a review-management SaaS product, covering onboarding, client-side and dashboard screen.
- Built a 21-component Figma design system with multiple states, adopted by designers and developers to produce screens faster and cut handoff back-and-forth.

EDUCATION

Brawijaya University | Bachelor of Computer Science - Information Systems
Aug 2021 - Jun 2025 | Malang, Indonesia

- **GPA**: 3.82 / 4.00
- **Thesis**: Built and usability-tested a dual-sided job portal (job seeker and recruiter) with 12 participants; 100% task completion and Single Ease Question (SEQ) scores of 5.71 and 6.25 out of 7 across the two user groups.
- **Award**: 2nd Place, PKM Maba Student Creativity Competition (Science & Technology, Faculty). Led a 3-person team building A-CARA, a booking platform connecting performers with cafes, restaurants and event organizers.

SKILLS & TOOLS

- **Design & Research**: UI/UX Design, Product Design, Interaction Design, Design Thinking, User Research & Interviews, Usability Testing, User Flow & Journey Mapping, Competitor Analysis, Information Architecture, Wireframing, Prototyping, Hi-Fi UI Design, Responsive Web & Mobile App Design, Design Systems (tokens, variables, components), Accessibility (WCAG), A/B Testing.
- **Product & Collaboration**: Cross-Functional Collaboration, Stakeholder Communication, Product Requirements (PRD), Epics, Developer Handoff Documentation, Data-Driven Design (metrics, product analytics), Agile/Scrum.
- **Tools**: Figma (Auto Layout, Variables, prototyping), Framer, Maze, Miro, Notion, ClickUp.
- **AI-Assisted Design**: Claude, Google Stitch, Antigravity, NotebookLM, Recraft.
- **Technical**: HTML, CSS, JavaScript (basic), Database Schema Design (ERD).
- **Languages**: Bahasa Indonesia (Native), English (B1 Intermediate).
